---	--

- Chip Ferrite Beads are effective for frequencies ranging from a few MHz to a few GHz. Chip Ferrite Beads are widely used as a low noise countermeasure, as well as a universal noise suppression component.
- Chip Ferrite Beads produce a micro inductance in the low frequency range. At high frequencies, however, the resistive component of the inductor produces the primary impedance. When inserted in series in the noise producing circuit, the resistive impedance of the inductor prevents noise propagation.

## Outline of EMI Suppression Filters (EMIFIL®) for DC Line

- Chip EMIFIL®

- This capacitor type EMI suppression filter has a large noise suppression effect at frequencies ranging from a few MHz to hundreds of MHz. This type of filter is used widely as a universal, high performance EMI suppression component.
- The chip EMIFIL® incorporates a built-in three terminal capacitor, eliminating the lead wire and thereby increasing the high frequency performance characteristic.
- The T-type chip EMIFIL® is a chip EMI suppression filter with a built-in feed-thru capacitor. The use of ferrite beads on input and output terminals minimizes resonance with surrounding circuits.
- Whatever the situation, three terminal construction reduces residual inductance, thereby substantially improving noise suppression at frequencies over 10MHz.

[Comparison of Insertion Loss Characteristics]

A three terminal capacitor has a higher self resonance frequency than a general two terminal type and exhibits effective noise suppression at high frequency.

## Outline of EMI Suppression Filters (EMIFIL®) for DC Line

--	--

- High-speed signal application EMIFIL® are high performance EMI suppression filters which increase the slope of insertion loss frequency characteristic curves (shape factor), thereby improving noise and signal separation. These are used for high speed signal applications in which noise and signal frequency approach the same value. To avoid the elimination of both the noise and specific signal components, three terminal capacitors and other components are applied. An NFW31S with a built-in capacitor and an inductor type BLM□□B are available. BLM□□HB/HD has additional performance for suppressing GHz range noise after cut-off frequency.
- The EMIFIL® with waveform distortion suppressing function suppresses waveform distortion caused by the resonance of digital ICs and surrounding circuits.

## Outline of EMI Suppression Filters (EMIFIL®) for DC Line

- These choke coils reduce common mode noise, which causes problems on balanced transmission lines, and are effective against common mode noise in the several MHz to several 100MHz frequency range. They are ideally suited for noise suppression on DC power supply lines and interface cables.

## Outline of EMI Suppression Filters (EMIFIL®) for DC Line

### ● EMIGUARD®

- EMIGUARD® eliminates both surge noises and EMI noises due to its dielectric varistor material.
- Effective when high frequency noise and high voltage surge suppression are required, and also in situations when surging starts at extremely high speeds. This type of surging cannot be eliminated with general type varistors.

### ■ Surge Absorption Effect of EMIGUARD®

Type of Filter	Surge Absorption Effect of EMIGUARD®
No filter	
Three terminal capacitor is used to suppress the surge.	
EMIGUARD® is used to suppress the surge. (VFS6V)

**BNX002-01**

**BNX003-01**

**BNX005-01**

**BNX012-01**

**BNX016-01**

- Block type EMIFIL® are resin encased, built-in, high performance EMI suppression filters, which use a feed-thru capacitor having excellent high frequency characteristics.
- Used when the noise frequency is high, or when extreme countermeasures are required.
- The high performance EMIFIL® BNX series exhibits significant noise suppression effects over a wide frequency band (extending from 100kHz to 1GHz) in DC power lines.

[Equivalent Circuit (BNX Series)]

[Insertion Loss Characteristics]

- In operating temperatures exceeding +85°C, derating of current is necessary for BNX010 series. Please apply the derating curve according to the operating temperature.

# On-Board Type (DC) EMI Suppression Filters (EMIFIL®)

## Chip Ferrite Bead BLM Series

1

# Essential for Noise Suppression in High Speed Signal Lines and DC Power Lines

The chip ferrite bead BLM series comprises ferrite beads in the shape of a chip. This ferrite bead generates a high impedance which at high frequencies mainly consists of a resistance element. The BLM series is effective in circuits without stable ground lines because the BLM series does not need a connection to ground.

Chip sizes of 0.6x0.3, 1.0x0.5, 1.6x0.8, 2.0x1.25, 3.2x1.6 and 4.5x1.6mm are cataloged. (The BLA series of array type chip ferrite beads is also cataloged.)

The nickel barrier structure of the external electrodes provides excellent solder heat resistance.

### ■Features

The BLM series comprises the R series (for digital interface), the A series (for standard), the B series (for high speed signal), the P series (for large current), and the H/E/G series (for GHz range noise suppression).

#### 1. BLM□□R series – For Digital Interface

The BLM-R series can be used in Digital Interface. Resistance of BLM-R series especially grows in the lower frequency range. Therefore BLM-R series is less effective for digital signal waveform at low frequency range and can suppress the ringing.

#### 2. BLM□□A/T series – For General Use

The BLM-A series generates an impedance from the relatively low frequencies. Therefore the BLM-A series is effective in noise suppression in the wide frequency range (30MHz – several hundred MHz).

#### 3. BLM□□B series – For High Speed Signal

The BLM-B series can minimize attenuation of the signal waveform due to its sharp impedance characteristics. Various impedances are available to match signal frequency.

#### 4. BLM□□P/S series – For Large Current

The BLM-P/S series can be used in high current circuits due to its low DC resistance. It can match power lines to a maximum of 6A DC.

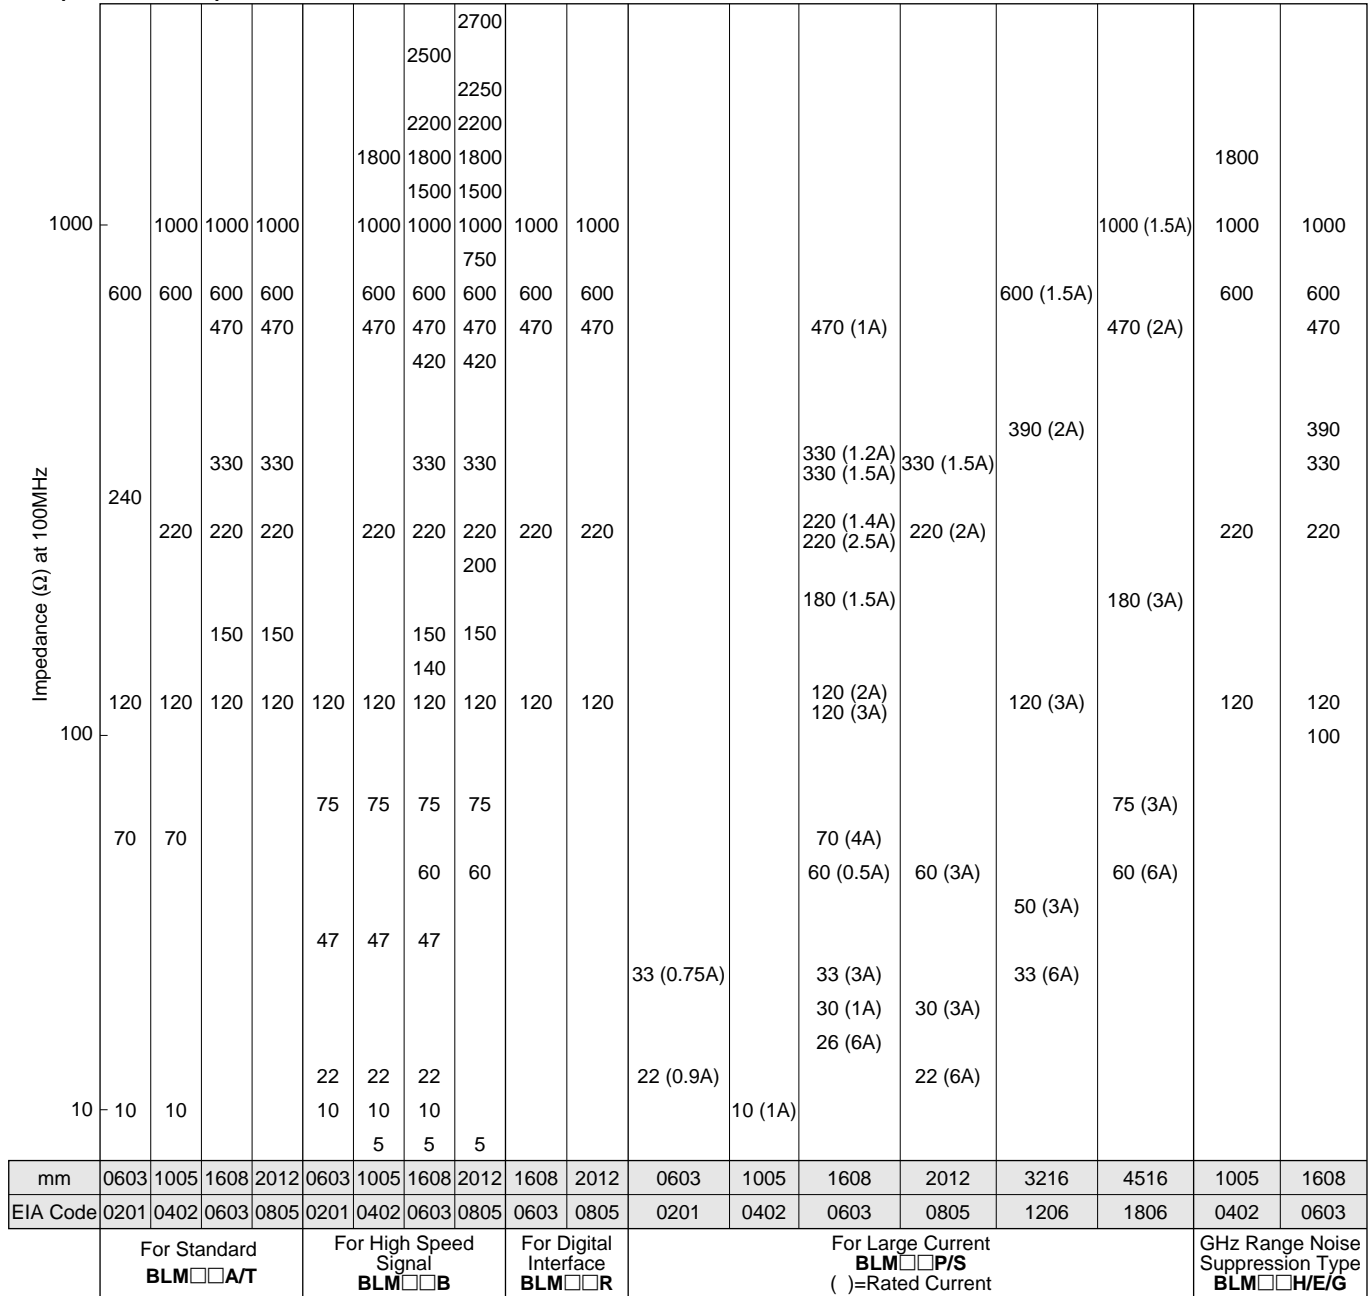

#### 5. BLM□□H/E/G series – For GHz Range Noise Suppression

The BLM□□H/E/G series has a modified internal electrode structure that minimizes stray capacitance and increases the effective frequency range.

# On-Board Type (DC) EMI Suppression Filters (EMIFIL®)

## Chip Ferrite Beads BLM03/15/18/21/31/41 Series

1

### ■ Features (BLM\_A Series)

The chip ferrite beads BLM series is designed to function nearly as a resistor at noise frequencies, which greatly reduces the possibility of resonance and leaves signal wave forms undistorted.

The BLM series is effective in circuits without stable ground lines because the BLM series does not need a connection to ground.

The nickel barrier structure of the external electrodes provides excellent solder heat resistance. BLM\_A series generates an impedance from the relatively low frequencies. Therefore BLM\_A series is effective in noise suppression in a wide frequency range (30MHz to several hundred MHz).

The small size of BLM03A series (0.6x0.3mm) is suitable for noise suppression in small equipment such as PA modules for cellular phones.

## BLM18T Series (0603 Size)

### ■ Features

The chip ferrite beads BLM series is designed to function nearly as a resistor at noise frequencies, which greatly reduces the possibility of resonance and leaves signal wave forms undistorted.

The BLM series is effective in circuits without stable ground lines because the BLM series does not need a connection to ground.

The nickel barrier structure of the external electrodes provides excellent solder heat resistance. BLM\_T series generates an impedance from the relatively low frequencies. Therefore BLM\_T series is effective in noise suppression in a wide frequency range (10MHz to several hundred MHz). BLM\_T series contributes further to miniaturizing portable equipment.

■ Features (BLM\_B Series)

The chip ferrite beads BLM series is designed to function nearly as a resistor at noise frequencies, which greatly reduces the possibility of resonance and leaves signal wave forms undistorted.

The BLM series is effective in circuits without stable ground lines because the BLM series does not need a connection to ground.

The nickel barrier structure of the external electrodes provides excellent solder heat resistance.

The BLM\_B series can minimize attenuation of the signal waveform due to its sharp impedance characteristics. Various impedances are available to match signal frequency.

The small size of BLM03B series (0.6x0.3mm) is suitable for advanced high-density mounting, and is followed on a miniaturization of digital equipment, or module of a functional portion.

### ■ Features (BLM\_R Series)

The chip ferrite beads BLM series is designed to function nearly as a resistor at noise frequencies, which greatly reduces the possibility of resonance and leaves signal wave forms undistorted.

The BLM series is effective in circuits without stable ground lines because the BLM series does not need a connection to ground.

The nickel barrier structure of the external electrodes provides excellent solder heat resistance. The BLM\_R series can be used in a digital Interface. Resistance of BLM\_R series especially grows in the lower frequency range. Therefore BLM\_R series is less effective for digital signal waveform at low frequency range and can suppress the ringing.

# Noise Suppression Effect of BLM\_R Series

## Waveform Distortion Suppressing Performance of BLM□□R Series

Type of Filter	EMI Suppression Effect / Description		
Initial (No filter)	<p>Signal waveform (100nsec/div, 2V/div)</p>	<p>Expand (10nsec/div, 2V/div)</p>	<p>Spectrum</p>
Resister (47Ω) is used	<p>Signal waveform (100nsec/div, 2V/div)</p>	<p>Expand (10nsec/div, 2V/div)</p>	<p>Spectrum</p>
<b>BLM18RK221SN1</b> (220Ω at 100MHz) is used	<p>Signal waveform (100nsec/div, 2V/div)</p>	<p>Expand (10nsec/div, 2V/div)</p>	<p>Spectrum</p>
	<p>BLM18R has excellent performance for noise suppression and waveform distortion suppression.                      BLM18R suppresses drastically not only spectrum level in more than 100MHz range but waveform distortion.</p>		

■ Features (BLM\_P Series)

The chip ferrite beads BLM series is designed to function nearly as a resistor at noise frequencies, which greatly reduces the possibility of resonance and leaves signal wave forms undistorted.

The BLM series is effective in circuits without stable ground lines because the BLM series does not need a connection to ground.

The nickel barrier structure of the external electrodes provides excellent solder heat resistance. The BLM\_P series can be used in high current circuits due to its low DC resistance. It can match power lines to a maximum of 6A DC.

The small size of BLM03A series (0.6x0.3mm) is suitable for noise suppression in small equipment such as PA modules for cellular phones.

# On-Board Type (DC) EMI Suppression Filters (EMIFIL®)

## GHz Noise Suppression Chip Ferrite Beads BLM15H/15E/18H/18E/18G Series

1

Excellent high frequency impedance characteristics with 0402 (EIA) size.

### Equivalent Circuit

#### Features (BLM15HG/HD/EG Series)

1. Small size: 1.0x0.5mm (0402)
2. Suitable for noise suppression in 1GHz or higher frequency
3. Low DC Resistance/Large Rated Current (BLM15E)
4. No Lead production using Ni+Sn plating in termination

#### Applications

1. EMI suppression for Note PC and DSC
2. Noise suppression for data line in mobile phone
3. Prevention of erroneous operation caused by local oscillation signal in mobile phone
4. Optical pickup modules

#### Features (BLM15HB Series)

1. Small size: 1.0x0.5mm
2. Suitable for noise suppression in 1GHz or higher frequency
3. No Lead production using Ni+Sn plating in termination

#### Applications

1. EMI suppression for Note PC and DSC
2. Noise suppression for data line in mobile phone
3. Noise suppression for USB interface line in mobile phone
4. Prevention of erroneous operation caused by local oscillation signal in mobile phone

## ■ BLM18 Series

BLM18H/BLM18E series has a modified internal electrode structure, that minimizes stray capacitance and increases the effective frequency range.

### ■ Features (BLM18H series)

1. BLM18H series realizes high impedance at 1GHz and is suitable for noise suppression from 500MHz to GHz range. The impedance value of HG/HD-type is about three times as large as that of A/B-type at 1GHz, though the impedance characteristic of HG/HD-type is similar to A/B-type at 100MHz or less.
2. HG-type is effective in noise suppression in wide frequency range (several MHz to several GHz). HB/HD-type for high-speed signal line provides a sharper roll-off after the cut-off frequency. HK-type for digital interface is effective in suppressing the ringing because resistance especially grows in the lower frequency.
3. The magnetic shielded structure minimizes crosstalk.

### ■ Features (BLM18E series)

1. Low DC Resistance and a large Rated Current are suitable for noise suppression of the driver circuit.
2. Excellent direct current characteristics
3. Thin type (t=0.5mm) is suitable for small and low profile equipment such as DSC, cellular phones.

Chip ferrite beads for high frequency noise suppression over a wide frequency range.

**Features**

1. High impedance characteristic in 1GHz or higher frequency
2. High impedance characteristic over a wide frequency band range of 100MHz to 6GHz
3. Small decrease in impedance during current loading, resulting in small impedance fluctuation during equipment operation.
4. Reflow soldering only

**Applications**

1. Noise suppression for PCs with high-speed CPU and high-speed bus, and for interface line of peripheral equipment.
2. High harmonic noise suppression for digital equipment with several hundred MHz or higher clock speeds.
3. Prevention of erroneous operation caused by local oscillation signals in mobile phone and W-LAN module (ensuring self-immunity).
4. Bias Tee modules in optical transceivers

## Chip Ferrite Beads Arrays BLA2AA/2AB/31A/31B Series

### BLA2AA/BLA2AB Series

#### ■ Features

1. BLA2AA/2AB series has 4 circuits in 2.0x1.0mm body with 0.5mm pitch.
2. Provides attenuation across a broad frequency range. Two types of impedance characteristics are available, one is for general signal line and the other is for high speed signal line.
3. Original inner electrode structure enables extra low crosstalk.
4. The nickel barrier structure of the external electrodes provides excellent solder heat resistance.

#### ■ Applications

Notebook size PCs, PDAs and other compact size digital equipment

## BLA31A/BLA31B Series

The miniaturization of electronic equipment requires high performance EMI filters which enable high density mounting. BLA31A/B series consists of 4 circuits of ferrite beads.

BLA31A/B is suitable for EMI suppression in smaller digital equipment.

### ■ Features

1. BLA31A/B has 4 circuits in 3.2x1.6mm body with 0.8mm pitch.
2. Provides attenuation across a broad frequency range.  
Two types of impedance are available which meet general signal line and high speed signal line.
3. Original inner electrode structure enables extra low crosstalk.
4. The nickel barrier structure of the external electrodes provides excellent solder heat resistance. Both flow and reflow soldering methods can be employed.

# On-Board Type (DC) EMI Suppression Filters (EMIFIL®)

## Chip EMIFIL® Capacitor Type NFM18C/21C/3DC/41C Series

### NFM18C Series

The NFM18CC series is a 1.6x0.8mm EMI suppression filter for signal lines which have a three terminal structure using Murata's multilayer technology.

#### ■ Features

1. Ultra small size in 1.6x0.8x0.6mm enables high density mounting.
  2. Three terminal structure with low residual inductance (ESL)\* characteristics achieves large insertion loss characteristics even in high frequency area.
  3. The NFM18CC series covers capacitance range from 22 to 22,000pF.
- \* Not exceeding one-tenth of monolithic ceramic capacitors (two terminals).

#### ■ Applications

1. EMI suppression of circuit for insertion loss in quantity
2. Noise suppression up to GHz

2

#### ■ Insertion Loss Characteristics (Typical)

## NFM21C Series

The chip "EMIFIL" NFM21C series is a chip type three terminal EMI suppression filter. It can reduce residual inductance to an extremely low level making it excellent for noise suppression at high frequencies.

### ■ Features

1. Small and low profile of 2.0x1.25x0.85mm enables high density mounting.
2. Three terminal structure enables high performance in high frequency range.
3. Uses original electrode structure which realizes excellent solderability.
4. An electrostatic capacitance range of 22 to 22,000pF enables suppression of noise at specific frequencies.

NFM21C Series

### ■ Applications

1. PCs and peripherals which emit high amount of noise
2. Compact size equipment such as PDAs, PC cards and mobile telecommunications equipment
3. Severe EMI suppression and high impedance circuits such as digital circuits

# On-Board Type (DC) EMI Suppression Filters (EMIFIL®)

## Chip EMIFIL® Capacitor Array Type NFA31C Series

The NFA31C series is a chip EMI suppression filter for surface mount applications using Murata's ceramic processing technology and filter design technology. The series is well suited for EMI suppression in digital I/O lines of varied electronic equipment such as notebook size PCs.

### ■ Features

1. High density mounting can be realized because of 4 circuits in one package with 0.8mm pitch.
2. Suitable for high frequency noise suppression because of low residual inductance of three terminal structure.
3. Excellent EMI suppression can be realized because of two terminal simple GNDs for 4 circuits.
4. 20 to 22000pF lineups can be used depending on noise frequency.

### ■ Applications

1. Personal computers and peripherals
2. Telephones, PPCs, communications equipment
3. Digital TVs, DVDs

## Chip EMIFIL® LC Combined Monolithic Type NFL18ST/18SP/21S Series

### NFL18ST Series

The NFL18ST series is an EMI suppression filter for high speed signal lines, achieving T-type structure in 1.6x0.8mm size with Murata's multilayer technology.

#### ■ Features

1. Ultra-small size in 1.6x0.8x0.8mm
2. Steep insertion loss characteristics realize excellent noise suppression and prevent distortion of signal waveform.
3. By minimizing stray capacitance of inductor, achieves high performance in noise suppression in high frequency range.
4. Three different values of cut-off frequency are available, ranging from 200MHz up to 500MHz.
5. Since all side electrode structures are the same, it is no polarity.

(in mm)

#### ■ Applications

Noise suppression for video signal lines (RGB lines) and high speed clock lines

The chip "EMIFIL" NFL18SP series is an EMI Suppression filter for high speed signal lines, achieving pi-type structure in 0603 size with Murata's multilayer technology.

### ■ Features

1. Ultra-small size in 1.6x0.8x0.6 mm
2. Achieves high performance in noise suppression over wide frequency range
3. Steep insertion loss characteristics realize excellent noise suppression and prevent distortion of signal waveform.
4. Line up 4 items of cut-off frequency range from 150 to 500MHz

### ■ Applications

EMI suppression for digital signal line such as RGB and high speed clock lines

## NFL21S Series

The chip "EMIFIL" NFL21S series is a high performance EMI suppression filter in 2.0x1.25mm size for high speed signal lines by using Murata's processing technology.

### ■ Features

1. Suppresses noise with little attenuation of the signal itself due to its steep filtering characteristics.
2. Murata's original internal structure design enables excellent noise suppression up to high frequencies.
3. Available in ten different values of cut-off frequency ranging from 10MHz up to 500MHz.

### ■ Applications

Suppression of high magnitude radiated noise generated by high speed digital circuits such as clock and RGB

# On-Board Type (DC) EMI Suppression Filters (EMIFIL®)

## Chip EMIFIL® LC Combined Wire Wound Type NFW31S Series

The signal line chip EMI filter NFW31S series consists of high performance EMI suppression filters. They are designed for noise suppression in high speed signal digital circuits in which the signal harmonics are prone to becoming noise sources. These filters achieve a 100dB/dec. (typ.) damping characteristic with Murata's innovative circuit design. This makes these chips effective in applications where the signal and noise frequencies are close to each other.

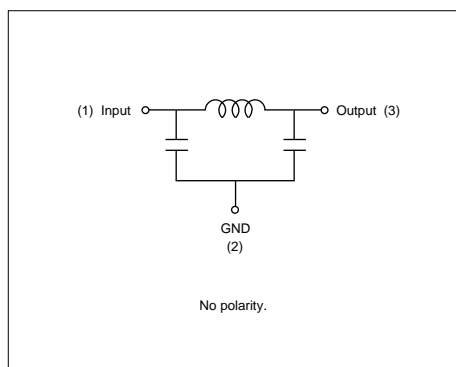

### ■ Features

1. Suppresses signal noise with little or no attenuation of the signal itself.
2. Murata's original internal structure design enables excellent noise suppression up to high frequencies (40dB at 1GHz typ.).
3. The NFW31S series is available in 9 different values of cut-off frequency ranging from 10MHz up to 500MHz.

Part Number	Nominal Cut-off Freq. ## Noise Suppression Effect of NFW31S Series

### Example of EMI Suppression in an Actual Circuit

Type of Filter	Signal Wave Form (20ns/div, 1V/div)	EMI Suppression Effect	Description
Signal Waveform and Noise Spectrum before Filter Mounting	 Signal Waveform (20ns/div, 1V/div)	 Noise Level (dBμV) vs Frequency (MHz) Noise Spectrum (10:1 Active Probe)	
<b>NFW31S Series</b> (Cut-off frequency 50MHz)	 Signal Waveform (20ns/div, 1V/div)	 Noise Level (dBμV) vs Frequency (MHz) Level before filter mounting (dashed line) Level after filter mounting (solid line)	The NFW31S's steep attenuation characteristic means excellent EMI suppression without waveform cornering.
Conventional Chip Solid Type EMI Filter (NFM41CC 470pF)	 Signal Waveform (20ns/div, 1V/div)	 Noise Level (dBμV) vs Frequency (MHz) Level before filter mounting (dashed line) Level after filter mounting (solid line)	3-terminal capacitors suppress signal frequencies as EMI frequencies so the signal waveform is distorted.
Filter Combined with Conventional LCs  L : Chip Inductor C : Chip Capacitor (270pF)	 Signal Waveform (20ns/div, 1V/div)	 Noise Level (dBμV) vs Frequency (MHz) Level before filter mounting (dashed line) Level after filter mounting (solid line)	Combinations of inductors and capacitors can yield a steep attenuation characteristic, but they require a great deal more mounting space. Moreover, at high frequencies the EMI suppression is less than that obtained by the NFW31S.

# On-Board Type (DC) EMI Suppression Filters (EMIFIL®)

## Chip EMIFIL® RC Combined Type NFR21G Series

The NFR21G series comprises high performance EMI suppression filters which can suppress distortion of waveform. Various items are to be used, considering circuit impedance and noise condition.

### ■ Features

1. Murata's original inner design realizes small and low profile of 2.0x1.25x0.5mm.
2. Distributed constant circuit realizes smooth change of impedance which prevents reflection of signal and distortion of wave shape.
3. The NFR21G series is effective in a line where ground is not stable, because the resistance element in the filter absorbs noise and returns it to ground line.
4. The NFR21G series has no polarity so it can be used in dual direction transport lines.
5. The NFR21G series has various lineups of resistance (22 to 100 ohm) and capacitance (10 to 100pF).

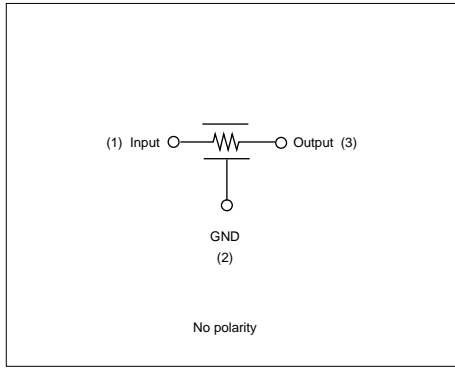

### ■ Applications

Interface lines and clock lines where signals tend to be distorted

Part Number	Capacitance (pF)	Resistance (ohm)	Rated Current (mA)	Rated Voltage (Vdc)	Insulation Resistance (M ohm)	Operating Temperature Range (°C)

## Noise Suppression Effect of NFR21G Series

### ■Effect of Noise Suppression by NFR21G

The NFR21G is effective even if ground line is not stable enough due to its distributed constant circuit structure.

[Testing Circuit]

### With Stable Ground Line

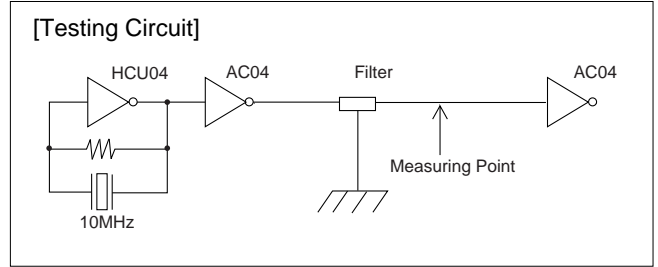

Type of Filter	EMI Suppression Effect	Description
Noise Level without Filter		
Filter Mounting Condition Standard Type Chip EMIFIL® (100pF)		The standard type chip EMIFIL® is effective on stable ground lines.
Filter Mounting Condition <b>NFR21GD4701012</b>		The NFR21G has some advantages to standard type EMIFIL® on stable ground lines.

### With Poor Ground Line

Type of Filter	EMI Suppression Effect	Description
Noise Level without Filter		
Filter Mounting Condition Standard Type Chip EMIFIL® (100pF)		The standard type EMIFIL® loses efficiency on poor ground lines.
Filter Mounting Condition <b>NFR21GD4701012</b>		The NFR21G is effective even on poor ground lines because of its distributed constant circuit structure and unique system to limit rush current.

## Noise Suppression Effect of NFR21G Series

### Waveform Distortion Suppressing Function by NFR21G

Type of Filter	EMI Suppression Effect	Description
Initial Waveform (no filter)	<p>Voltage Waveform</p> <p>↑ :1V/div      → :20ns/div</p>	Resonance between the internal capacitance of the IC and the inductance of the print pattern causes waveform overshooting and undershooting.
When Ordinary Capacitor Filter is Used	<p>Voltage Waveform</p> <p>↑ :1V/div      → :20ns/div</p>	Ordinary capacitor filters have no waveform distortion suppressing capability, and they cannot suppress disturbances in the waveforms.
NFR21G	<p>Voltage Waveform</p> <p>↑ :1V/div      → :20ns/div</p>	The waveform distortion suppressing function of the NFR21G minimizes disturbances of waveforms.

## NFM18PC Series

NFM18PC series is a high performance EMI suppression filter in 1.6x0.8mm size for high-speed IC power supply lines by using Murata processing technology.

### ■ Features

1. Ultra-small size in 1.6x0.8mm
  2. Three terminal structure with low residual (ESL)\* and large capacitance 1 micro F (max.) realize large insertion loss characteristics over wide frequency range.
  3. Large rated current 2A is suitable for noise suppression of circuits which require large current.
  4. The NFM18P series has line up of capacitance 0.1 to 1.0 micro F.
- \* Not exceeding one-tenth of monolithic ceramic capacitors (two terminal).

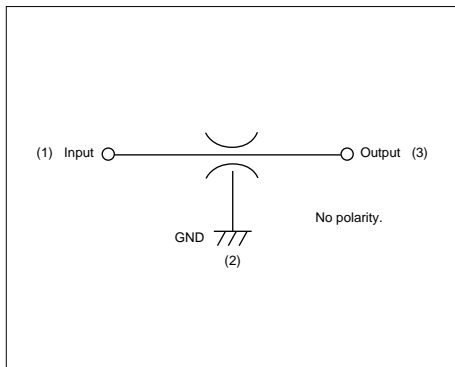

### ■ Applications

1. Noise suppression for large capacitance circuits such as high speed IC power lines
2. Control change of voltage for high speed IC

## NFM21P Series

NFM21P is a three terminal structure component. This product can be applied to large current DC power lines. NFM21P is suitable for noise suppression of DC power lines where relatively large current operates.

### ■ Features

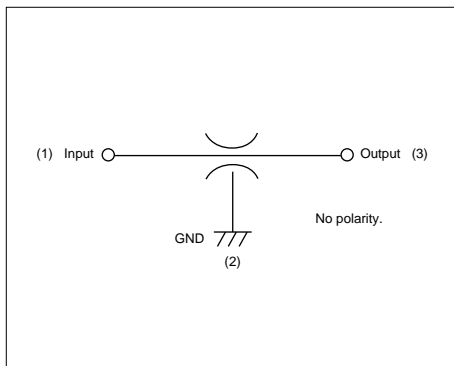

1. The rated current of 4A is suitable for IC's individual power lines.
2. Small dimension enables higher density packaging.  
NFM21P is much smaller size (2.0x1.25x0.85mm).
3. Murata's original internal electrode structure design realizes excellent EMI suppression effects from low frequency to high frequency.

## Chip EMIFIL® LC Combined Type for Large Current NFE61H Series

The T-type chip EMI Filter NFE61H series consists of a feedthrough capacitor and ferrite beads. Extending the operating conditions of NFE61P, NFE61H series can be used in an application set under severe operating conditions.

### ■ Features

1. These filters have an extended operating temperature range of -55 to +125 degree C.
2. Its large rated current of 2A and low voltage drop due to small DC resistance are suitable for DC power line use.
3. The feedthrough capacitor realizes excellent high frequency characteristics.
4. The structure incorporates built-in ferrite beads which minimize resonance with surrounding circuits.
5. 33 to 3300pF lineups can be used in signal lines.

## Chip Common Mode Choke Coils Film Type DLP0NS/11S/31S Series

### DLP0NS Series

#### ■ Features

1. Small size and tight dimensional tolerance  
Size: 0.85x0.65x0.45mm Tolerance: +-0.05mm
2. Useful impedance line-up from 67 ohm to 120 ohm
3. DLP0NS series enables noise suppression for differential signal line without distortion in high-speed signal transmission due to its line impedance matching

#### ■ Applications

Common mode noise suppression of high speed differential signal lines for USB 2.0, IEEE1394, LVDS

1. Note PCs
2. Cellular phones
3. Digital Still Cameras, Digital Video Cameras

3

Part Number	Common Mode Impedance (at 100MHz, 20°C) (ohm)	Rated Current (mA)	Rated Voltage (Vdc)	Insulation Resistance (min.) (M ohm)	Withstand Voltage (Vdc)	DC Resistance (ohm)

## DLP31S Series

DLP31S series is chip common mode choke coil that realizes high impedance in a small size with ferrite material technology and film processing technology. DLP31S series has excellent performance at high frequency range. It is suitable for differential signal line application.

### ■ Features

1. Small size, low profile, SMD. 3.2x1.6x1.15mm (Tolerance: 0.15mm)
2. High common mode impedance (550 ohm at 100MHz typ.) in small size
3. DLP31S suppresses high frequency noise that was unable to be suppressed with existing common mode choke coils. Suitable for differential signal lines like USB, because DLP31S does not provide distortion to high speed signal transmission due to its high coupling (coupling coefficient: 0.98 min.)

### ■ Applications

1. USB lines of PCs, peripheral equipment
2. LVDS lines of Note-PCs, LCDs
3. USB lines of digital AV equipment such as digital cameras

Part Number	Common Mode Impedance (at 100MHz, 20°C) (ohm)	Rated Current (mA)	Rated Voltage (Vdc)	Insulation Resistance (min.) (M ohm)	Withstand Voltage (Vdc)	DC Resistance (ohm)
DLP31SN121ML2	120 ±20%	100	16	100	40	2.0 max.

# On-Board Type (DC) EMI Suppression Filters (EMIFIL®)

## Chip Common Mode Choke Coils Arrays Film Type DLP2AD/31D Series

### DLP2AD Series

#### ■ Features

- 2 components are included in 2.0x1.0mm size
- Low profile: typ. 0.82mm
- High common mode impedance characteristics (max. 280 ohm, at 100MHz)
- DLP2AD can suppress common mode noise without damage to signal wave.
- DLP2AD match with line impedance.

#### ■ Applications

Common mode noise suppression of high speed differential signal lines for USB, IEEE1394 LVDS, DVI, HDMI

- Main board of personal computers, Note PCs
- Printers, Scanners
- LCD monitors
- Game equipment
- PC peripheral equipment

## Transmission Characteristics

## DLP31D Series

DLP31D series is chip common mode choke coil array which realizes high coupling and high impedance in a small size with ferrite material technology and thin film processing technology.

### Features

- 2 components are included in 3.2x1.6mm
- Thin type 1.15mm
- High common mode Impedance characteristics (max. 440 ohm, at 100MHz)
- The DLP31D can suppress common mode noise without damage to signal wave.

### Applications

Common mode noise suppression of high speed differential signal lines for USB, IEEE1394, LVDS

- Main board of personal computers, note PCs
- Printers, Scanners
- LCD monitors
- Game equipment
- PC peripheral equipment

## Chip Common Mode Choke Coils Monolithic Type DLM11G/2HG Series

### DLM11G Series

Small size chip common mode choke coil.  
 Suitable for noise suppression at audio line for mobile phone.

#### ■ Features

1. Small size: 1.25x1.0x0.5mm
2. Noise suppression for personal mobile equipment
3. Enables suppression of both differential mode and common mode noise.  
 Common mode impedance:  
 600 ohm at 100MHz (typ.)  
 Differential mode impedance:  
 1200 ohm at 100MHz (typ.)
4. Available for high density mounting (Narrow pitch)

#### ■ Applications

1. Audio line for mobile phones  
 (Microphones, Speakers, Headphones)
2. Handsets
3. Personal mobile equipment  
 (PDAs, Digital still cameras, MD players)

Part Number	Common Mode Impedance (at 100MHz, 20°C) (ohm)	Rated Current (mA)	Rated Voltage (Vdc)	Insulation Resistance (min.) (M ohm)	Withstand Voltage (Vdc)	DC Resistance (ohm)

#### ■ Impedance-Frequency (Typical)

## DLM2HG Series

DLM2HG Series is a high quality noise suppression filter for headphone lines of high quality digital music equipment.

### ■ Features

1. Low distortion in audio signal, low crosstalk
2. Effective in noise suppression both of common mode and of differential mode
3. Small size, low profile, SMD 2.5x2.0x1.2mm

### ■ Applications

1. Headphone lines of digital music equipment such as DVDs, MD players
2. Headphone lines of Note-PCs, PDAs

Part Number	Common Mode Impedance (at 100MHz, 20°C) (ohm)	Rated Current (mA)	Rated Voltage (Vdc)	Insulation Resistance (min.) (M ohm)	Withstand Voltage (Vdc)	DC Resistance (ohm)

## Chip Common Mode Choke Coils Wire Wound Type DLW21S/21H/31S Series

### DLW21S Series

#### ■ Features (DLW21S\_SQ Series)

- DLW21S series realizes small size and low profile.  
2.0x1.2x1.2mm
- High common mode impedance at high frequency effects excellent noise suppression performance.
- Various common mode impedance items of 67 to 370 ohm can be used, considering noise level and signal frequency.
- DLW21S series enables noise suppression for differential signal line without distortion in high speed signal transmission due to its high coupling.
- Small dimension enables higher density packaging.

#### ■ Applications

- USB lines of PC, Peripheral equipment
- LVDS lines of Note-PCs, LCDs
- USB lines of Small digital AV equipment such as digital cameras

#### ■ Features (DLW21S\_HQ Series)

- Small size: 2.0x1.2x1.2mm
- Common mode impedance items of 67, 90 and 120 ohm, and they can be used for various differential signal lines.
- DLW21S\_H series match with line impedance of 100 ohm line.
- DLW21S\_H series can suppress noise for the high-speed differential signal lines which are used in digital AV interfaces, such as HDMI and DVI, without damage to the signal wave.

#### ■ Applications

Common mode noise suppression of high speed differential signal lines for HDMI, DVI, USB2.0, IEEE1394, LVDS.

- DVD Recorders
- LCD TVs, LCD monitors
- PCs

Part Number	Common Mode Impedance (at 100MHz, 20°C) (ohm)	Rated Current (mA)	Rated Voltage (Vdc)	Insulation Resistance (min.) (M ohm)	Withstand Voltage (Vdc)	DC Resistance (ohm)

## DLW21H Series

### ■ Features

1. Small size and low profile (2.0x1.2x0.9mm).  
Excellent noise suppression for sets of small and thin size.
2. High common mode impedance at high frequency effects excellent noise suppression performance.
3. Various common mode impedance from 67 to 180 ohm can be used, selected depending on noise level and signal frequency.
4. Suitable for differential signal line like USB2.0, IEEE1394 and LVDS, because DLW21H does not provide distortion to high speed signal transmission due to its high coupling. (USB2.0: DLW21HN900SQ2)
5. Small dimension enables higher density mounting

### ■ Applications

Common mode noise suppression of signal lines in high speed and high density digital equipment such as PCs and peripherals and telecommunications equipment.

Part Number	Common Mode Impedance (at 100MHz, 20°C) (ohm)	Rated Current (mA)	Rated Voltage (Vdc)	Insulation Resistance (min.) (M ohm)	Withstand Voltage (Vdc)	DC Resistance (ohm)

## Chip Common Mode Choke Coils Wire Wound Type for Large Current DLW5AH/5BS/5BT Series

### DLW5AH/5BS Series

The DLW5AH/5BS series is a high performance wound type chip common mode choke coil.

#### ■ Features

1. High impedance (max. of 4000ohm at 100MHz: DLW5AH) enables great noise suppression.
2. Large rated current (max. of 5A) is suitable for power line use.
3. DLW5AH/BS series does not damage high speed signal due to high coupling common mode choke coil structure.
4. Automatic mounting can be applied.

#### ■ Applications

1. DC power lines in AC adapters of Portable equipment
2. DC power lines of DC-DC converters, battery chargers

## Derating of Rated Current

### DLW5BSN191

## DLW5BT Series

Low profile (h=2.5mm) chip common mode choke coil.  
 Suitable for noise suppression at DC power line.

### Features

1. Low profile (h=2.5mm)
2. Small size (5.0x5.0mm) and high rated current (1.5 to 6A)
3. High common mode Impedance (max. 1400 ohm, at 100MHz)

### Applications

Noise suppression for power line

1. Power line equipment
  - DC-DC converters
  - Battery chargers
2. Portable equipment
  - PDAs (Personal Digital Assistance)
  - Note PCs
  - Printers

Part Number	Common Mode Impedance (at 100MHz, 20°C) (ohm)	Rated Current (mA)	Rated Voltage (Vdc)	Insulation Resistance (min.) (M ohm)	Withstand Voltage (Vdc)	DC Resistance (ohm)

# On-Board Type (DC) EMI Suppression Filters (EMIFIL®)

## Block Type EMIFIL® BNX Series

### SMD Type

BNX022 series is SMD type high performance and provides excellent noise suppression on DC power lines.

#### ■ Features

1. Large rated current (10A) and Low DC Resistance. (0.43m ohm - Typ.)
2. High insertion loss characteristic over a wide frequency range of 1MHz to 1GHz.
3. Mounting area and volume is reduced.
4. Effective for impulse noise such as electro-static discharge or spike noise.

#### ■ Applications

1. Displays (PDP/LCD-TV)
2. Digital AV equipment
3. Amusement equipment
4. PC peripheral equipment
5. Industry equipment, measurement equipment, power supplies

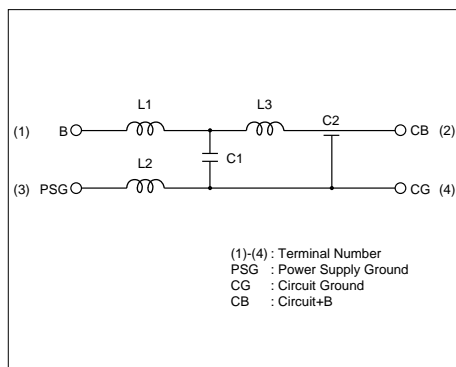

4

Part Number	Rated Voltage (Vdc)	Withstand Voltage (Vdc)	Rated Current (A)	Insulation Resistance (min.) (M ohm)	Insertion Loss
<b>BNX022-01</b>	50	125	10	500	1MHz to 1GHz:35dB min.(20 to 25degree C line impedance=50 ohm)

Operating Temperature Range: -40°C to 125°C  
 In operating temperatures exceeding +85°C, derating of current is necessary.  
 Please refer to p.129, "Derating of Rated Current".

#### ■ Equivalent Circuit

#### ■ Insertion Loss Characteristics (Typical)

Continued on the following page.

Continued from the preceding page.

### Derating of Rated current

In operating temperatures exceeding +85°C, derating of current is necessary for BNX022 series. Please apply the derating curve shown in chart according to the operating temperature.

### Lead Type

The block type "EMIFIL" BNX series incorporates through-type capacitor, monolithic chip capacitors and bead. The BNX is high performance for use in DC power circuits.

### Features

1. The filter enables obtaining high insertion loss in wide frequency ranges from 0.5MHz to 1GHz.
2. Effective for impulse noise such as electro static discharge or spike noise.
3. There are no connection routes in the current circuits, thus ensuring highly reliable performance.

### Applications

1. Displays (PDP/LCD-TV)
2. Digital AV equipment
3. Amusement equipment
4. PC peripheral equipment
5. Industry equipment

Part Number	Rated Voltage (Vdc)	Withstand Voltage (Vdc)	Rated Current (A)	Insulation Resistance (min.) (M ohm)	Insertion Loss
BNX002-01	50	125	10	100	1MHz to 1GHz:40dB min.(20 to 25degree C line impedance=50 ohm)
BNX003-01	150	375	10	100	5MHz to 1GHz:40dB min.(20 to 25degree C line impedance=50 ohm)
BNX005-01	50	125	15	100	1MHz to 1GHz:40dB min.(20 to 25degree C line impedance=50 ohm)

Operating Temperature Range: -30°C to 85°C

## Equivalent Circuit

## Insertion Loss Characteristics (Typical)

## Lead Type Low Profile

The block type "EMIFIL" BNX010 series is high performance and BNX series provide excellent noise suppression on DC power lines.

### Features

- High insertion loss characteristic over a wide frequency band range.  
 1MHz to 1GHz: 40dB min (BNX012)  
 100kHz to 1GHz: 40dB min (BNX016)
- Large rated current (15A) and Low Rdc (0.8m ohm-typ.)
- Low profile (height: 8.0mm except lead terminal)
- Effective for impulse noise such as electro static discharge or spike noise.

### Applications

- Displays (PDP/LCD-TV)
- Digital AV equipment
- Amusement equipment
- PC peripheral equipment
- Industry equipment

## Ferrite Beads Inductors BL01/02/03 Series

### ■ Features

BL01/02/03 series are ferrite beads with lead wires to produce a high frequency loss for suppression of noise. Simple construction and easy-to-use, effective for low impedance circuits such as power supplies and grounds. Effective also for preventing overshoot and undershoot of digital signal in clocks or the like, and suppressing the higher harmonic wave. Suitable for prevention of abnormal oscillation at high frequency amplifying circuit.

# On-Board Type (DC) EMI Suppression Filters (EMIFIL®)

## Disc Type EMIFIL® Broad Type DSN9/DSS9/DST9 Series

### ■ Features

DS\_9 is a basic type EMI suppression filter which can obtain high insertion loss in a wide frequency range. Its three terminal structure enables nice high frequency performance. DSS9NP32A222/DSS9NT31H223 are low distortion types for audio circuits.

### ■ Supplement

Diameter of lead is 0.6mm for taping type.  
Taping type is three terminal in line arrangement.

\*1 Coating extending on leads does not exceed the tangent line. Exposed electrode, if any, is covered by solder, etc.  
 \*2 There should not be the exposure of the ferrite bead if a hole is in top of filter, the ferrite bead should not be exposed.

## DSN9 Series

# On-Board Type (DC) EMI Suppression Filters (EMIFIL®)

## Lead Type EMIGUARD® (EMIFIL® with Varistor Function) VFR3V/VFS6V/VFS9V Series

### for Semiconductor Protection VFR3V Series

**■ Features**

The VFR3V series is designed for ESD surge protection of IC. It efficiently absorbs ESD surges rushed into IC's I/O terminal.

**■ Applications**

Elimination of noise and protection of semiconductors in office equipment, including computers and peripheral equipment, copy machines, and communication terminals.

Part Number	Rated Voltage (Vdc)	Varistor Voltage (Vdc)	Capacitance (pF)	Rated Current (mA)	Peak Pulse Current (A)	Operating Temperature Range (°C)

Please refer to Part Numbering for Type and Length of Lead.

**■ Insertion Loss Characteristics**

## for Signal-Line VFS6V Series

### ■ Features

The VFS6V series is designed for surge protection of signal line. It protects electric circuit from surges such as static electricity and suppresses EMI noise. Built-in ferrite bead gives excellent EMI suppression.

### ■ Applications

Elimination of noise and protection of electric circuits in office equipment, including computers and peripheral equipment, copy machines, and communication terminals.

Part Number	Rated Voltage (Vdc)	Varistor Voltage (Vdc)	Capacitance (pF)	Rated Current (A)	Peak Pulse Current (A)	Operating Temperature Range (°C)
VFS6VD81E221	25	50 +20%, -20%	220 +20%, -20%	6	100	-40 to 105

## Noise Suppression Effect of VFR/VFS Series

### ■Features (VFS9V)

Items	Test methods	Rated values										
Overload	1.4 times the varistor voltage ( $V_1$ ) is applied for 5 minutes at room temperature.	<table border="1"> <thead> <tr> <th>Items</th> <th>Specifications</th> </tr> </thead> <tbody> <tr> <td>Rated Capacitance Change</td> <td>Within±15%</td> </tr> <tr> <td>Insulation Resistance</td> <td>500kΩ min.</td> </tr> <tr> <td>Rated of Change in Varistor Voltage <math>V_1^*</math></td> <td>Within±15%</td> </tr> <tr> <td>Voltage Rate</td> <td>1.30 max.</td> </tr> </tbody> </table> <p>*<math>V_1</math> : Voltage when 1mA is applied</p>	Items	Specifications	Rated Capacitance Change	Within±15%	Insulation Resistance	500kΩ min.	Rated of Change in Varistor Voltage $V_1^*$	Within±15%	Voltage Rate	1.30 max.
Items	Specifications											
Rated Capacitance Change	Within±15%											
Insulation Resistance	500kΩ min.											
Rated of Change in Varistor Voltage $V_1^*$	Within±15%											
Voltage Rate	1.30 max.											
Surge Test (1)	At room temperature. Surges are applied are $10^5$ times every 2 seconds. Then after 1 or 2 hours, the sample is measured.											
Surge Test (2)	At room temperature. Capacitor "C" is charged with 70V, then discharged to apply the voltage to the sample. Tested once (resuming JASO A-1).											
High Temperature Load	At a temperature of $85\pm 3^\circ\text{C}$ . The varistor voltage $V_1$ is continuously applied to the sample for 1000 to 1024 hours. Then it is left at room temperature, for 4 to 24 hours before measuring.											

### ■Pulse-Voltage Breakdown Characteristic (VFS9V)

The VFS9V EMIGUARD® use a self healing varistor-capacitor, so that it can be used under a 500 to 600V surge which would break conventional disk type EMI filters. As shown in figure below the EMIGUARD® withstands 2000V impulses applied 1000 times.

### ■Temperature Characteristics of Varistor Voltage-Insulation Resistance (VFS9V)

Continued on the following page. ↗

## Noise Suppression Effect of VFR/VFS Series

Continued from the preceding page.

### ■ Noise Absorption Effect of EMIGUARD® (VFS9V)

Type of Filter	EMI Suppression Effect	Description
without EMIGUARD®		Waveform when EMIGUARD® is not used. (Surge from a noise simulator)
with EMIGUARD® 		Waveform after the noise passed through EMIGUARD®. Little noise is recorded.

### ■ Comparative Data (VFS9V)

#### 1. Absorption of quick-rising, high-frequency noise (10ns/div, 100V/div)

Type of Filter	EMI Suppression Effect	Description
without Filters		
Conventional varistor 		As with the two terminal capacitor
Two terminal capacitor (with varistor function) 		The two terminal capacitor is influenced by lead line inductance, leaving behind some of the rising and falling edges. The residual noise can cause the system to malfunction.
VFS9V 		The three terminal structure eliminates most of the lead line inductance. This allows the VFS9V to completely absorb the rising and falling edges of the applied pulses.

Continued on the following page. ↗

## Noise Suppression Effect of VFR/VFS Series

Continued from the preceding page.

### 2. Absorption of wide-pulse noise (50ns/div, 200V/div)

Type of Filter	EMI Suppression Effect	Description
without Filters	 <p>Noise wave applied</p>	
Two terminal capacitor		In capacitors the voltage of the residual surge (1300V) is higher than that of the above example. The wave height is almost the same as the original.
Three terminal capacitor (with ferrite bead)		Conventional EMI filters do not work for wide-pulse noise because capacitors are saturated. In this example, the residual 1200V surge can cause the system to breakdown.
VFS9V		Bypassing the high voltage to the ground, voltage can be suppressed.

# On-Board Type (DC) EMI Suppression Filters (EMIFIL®)

## Common Mode Choke Coils Part Numbering

### Common Mode Choke Coils

#### ① Product ID

Product ID	
PL	Common Mode Choke Coils

#### ② Type

Code	Type
T	DC Type

#### ③ Applications

Code	Applications
09H	for DC Line High-frequency Type

#### ④ Features

Code	Features
N	General Use

#### ⑨ Packaging

Code	Packaging	Series
B	Bulk	All series

#### ⑤ Inductance

Expressed by three figures. The unit is micro-henry (μH). The first and second figures are significant digits, and the third figure expresses the number of zeros which follow the two figures.

#### ⑥ Rated Current

Expressed by three-digit alphanumerics. The unit is in amperes (A). A decimal point is expressed by the capital letter "R". In this case, all figures are significant digits.

#### ⑦ Winding Mode

Code	Winding Mode
P	Aligned Winding Type

#### ⑧ Lead Dimensions

Code	Lead Dimensions
1	5mm

## Common Mode Choke Coils (for DC Line) PLT09H Series

The PLT09H series is a common mode choke coil for DC lines. It is effective against the common mode noise that can cause radiative noise in power supply lines and interface lines. The additional normal mode inductance enables high suppression effect to radiation noise.

### ■ Features

1. This is a wide frequency range type, applicable in applications ranging from a few MHz to several 100MHz.
2. It features a low-profile design.

### ■ Applications

1. Noise suppression of SW power supply, DC-DC converter
2. DC power lines in AC adapter of Portable equipment

PLT09H Series

Part Number	Common Mode Inductance (min.) (μH)	Rated Current (A)	Rated Voltage (Vdc)	Withstand Voltage (Vdc)
PLT09HN2003R0P1	20	3	50	125

Operating Temperature Range: -40°C to 85°C

## Microwave Absorbers EA10/20/21/30 Series

### EA10 Series

When inquiring, please contact us with size code, referring to "Part Numbering".

#### ■ Features

1. Excellent elasticity and durability with silicon rubber
2. Suitable for prevention of abnormal oscillation in high frequency modules, suppression of spurious spectra and prevention of interference between circuits
3. Holds easily in equipment with adhesive tape

Part Number	Applicable Frequency (Typ.)	Thickness (Typ.) (mm)	Flame Resistance	Halogen	Operating Temperature Range
EA1026A100	20.0GHz	1.0	UL94V-0	Halogen Free	-40 to +80°C
EA1026A160	11.5GHz	1.6	UL94V-0	Halogen Free	-40 to +80°C
EA1026A180	10.0GHz	1.8	UL94V-0	Halogen Free	-40 to +80°C
EA1046A180	5.8GHz	1.8	UL94V-0	Halogen Free	-40 to +80°C
EA1075A270	2.5GHz	2.7	UL94V-0	Halogen Free	-40 to +80°C

#### ■ Reflection Loss

## EA20/21 Series

When inquiring, please contact us with size code, referring to "Part Numbering".

### ■ Features

1. Magnetically-shielded high-micro and high-loss characteristics can suppress noise in a wide frequency band for digital equipment.
2. Thin (0.2mm-1.0mm) and flexible sheet makes easy handling in assembly process.
3. Holds easily in equipment with adhesive tape
4. EA20xx series: Non Halogen type  
EA21xx series: UL94V-0 certified material is used.

Part Number	Applicable Frequency (Typ.)	Thickness (Typ.) (mm)	Flame Resistance	Halogen	Operating Temperature Range
EA2070A020	0.1 to 3.0GHz	0.20	-	Halogen Free	-40 to +120°C
EA2070A050	0.1 to 3.0GHz	0.50	-	Halogen Free	-40 to +120°C
EA2070A100	0.1 to 3.0GHz	1.00	-	Halogen Free	-40 to +120°C
EA2070B005	0.1 to 3.0GHz	0.05	-	Halogen Free	-40 to +120°C
EA2070B010	0.1 to 3.0GHz	0.10	-	Halogen Free	-40 to +120°C
EA2070B013	0.1 to 3.0GHz	0.13	-	Halogen Free	-40 to +120°C
EA2070B020	0.1 to 3.0GHz	0.20	-	Halogen Free	-40 to +120°C
EA2070B050	0.1 to 3.0GHz	0.50	-	Halogen Free	-40 to +120°C
EA2100A020	0.1 to 3.0GHz	0.20	UL94V-0	-	-40 to +120°C
EA2100A050	0.1 to 3.0GHz	0.50	UL94V-0	-	-40 to +120°C
EA2100A100	0.1 to 3.0GHz	1.00	UL94V-0	-	-40 to +120°C
EA2100B020	0.1 to 3.0GHz	0.20	UL94V-0	-	-40 to +120°C
EA2100B050	0.1 to 3.0GHz	0.50	UL94V-0	-	-40 to +120°C
EA2100B100	0.1 to 3.0GHz	1.00	UL94V-0	-	-40 to +120°C

### ■ Magnetic Permeability-Reluctance (Typical)

## EA30 Series

When inquiring, please contact us with size code, referring to "Part Numbering".

### ■ Features

1. EMC Absorber magnetically shields and suppresses noise of digital equipment.
2. Flexible sheet, easy handling in assembly process.
3. Holds easily in equipment with adhesive tape.
4. Halogen free and UL94V-0 certified material are used.

Part Number	Applicable Frequency (Typ.)	Thickness (Typ.) (mm)	Flame Resistance	Halogen	Operating Temperature Range
EA3008U025	0.1 to 3.0GHz	0.25	UL94V-0	Halogen Free	-40 to +120°C
EA3008U035	0.1 to 3.0GHz	0.35	UL94V-0	Halogen Free	-40 to +120°C
EA3008U050	0.1 to 3.0GHz	0.50	UL94V-0	Halogen Free	-40 to +120°C
EA3008U100	0.1 to 3.0GHz	1.00	UL94V-0	Halogen Free	-40 to +120°C
EA3008U250	0.1 to 3.0GHz	2.50	UL94V-0	Halogen Free	-40 to +120°C

### ■ Magnetic Permeability-Reluctance (Typical)

## Chip EMIFIL® ⚠ Caution/Notice

### ■ ⚠ Caution (Rating)

Do not use products beyond the rated current and rated voltage as this may create excessive heat and deteriorate the insulation resistance.

### ■ ⚠ Caution (Soldering and Mounting)

#### 1. Self-heating

Please provide special attention when mounting chip "EMIFIL" (BLM\_P, NFM\_P) series in close proximity to other products that radiate heat.

The heat generated by other products may deteriorate the insulation resistance and cause excessive heat in this component.

#### 2. Mounting Direction

Mount Chip Common Mode Choke Coils in right direction. Wrong direction, which is 90 degree rotated from right direction, causes not only open or short circuit but also flames or other serious trouble.

### ■ Notice (Storage and Operating Conditions)

#### <Operating Environment>

Do not use products in a chemical atmosphere such as chlorine gas, acid or sulfide gas.

#### <Storage and Handling requirements>

##### 1. Storage Period

BLM (except BLM15E/15H series) /BLA/NFM55/DLP31S/DLM11G/DLM2HG series should be used within 6 months, the other series should be used within 12 months.

Solderability should be checked if this period is exceeded.

##### 2. Storage Conditions

(1) Storage temperature: -10 to 40 degree C

Relative humidity: 30 to 70%

Avoid sudden changes in temperature and humidity.

(2) Do not store products in a chemical atmosphere such as chlorine gas, acid or sulfide gas.

### ■ Notice (Soldering and Mounting)

#### 1. Washing

Failure and degradation of a product are caused by the washing method. When you wash in conditions that are not in mounting information, please contact Murata engineering.

#### 2. Soldering

Reliability decreases with improper soldering methods. Please solder by the standard soldering conditions shown in mounting information.

#### 3. Other

Noise suppression levels resulting from Murata's EMI suppression filters "EMIFIL" may vary, depending on the circuits and ICs used, type of noise, mounting pattern, lead wire length, mounting location, and other operating conditions. Be sure to check and confirm in advance the noise suppression effect of each filter, in actual circuits, etc. before applying the filter in a commercial-purpose equipment design.

### ■ Notice (Handling)

#### 1. Resin coating

Using resin for coating/molding products may affect the products performance.

So please pay careful attention in selecting resin.

Prior to use, please make the reliability evaluation with the product mounted in your application set.

#### 2. Caution for use (DLW Series)

When you hold products with a tweezer, please hold by the sides. Sharp materials, such as a pair of tweezers, should not touch the winding portion to prevent breaking the wire. Mechanical shock should not be applied to the products mounted on the board to prevent breaking the core.

## Lead Type EMIFIL® ⚠ Caution/Notice

### ■ ⚠ Caution (Rating)

Do not use products beyond the rated current and rated voltage as this may create excessive heat and deteriorate the insulation resistance.

### ■ ⚠ Caution (Soldering and Mounting)

Mounting holes should be designed as specified in these specifications. Other designs than shown in these specifications may cause cracks in ceramics which may lead to smoking or firing.

### ■ Notice (Storage and Operating Conditions)

#### <Operating Environment>

1. Do not use products in a chemical atmosphere such as chlorine gas, acid or sulfide gas.
2. Do not use products near water, oil or organic solvents. Avoid environment where dust or dirt may adhere to product.

#### <Concerning "EMIGUARD">

VFR3V series is designed only to absorb electrostatic surges. Do not use this product to absorb large energy surges such as lightning or switching related surges.

#### <Storage and Handling Requirements>

##### 1. Storage Period

Used the products within 12 months after delivery.  
Solderability should be checked if this period is exceeded.

### ■ Notice (Soldering and mounting)

#### 1. Washing

Failure and degradation of a product are caused by the washing method. When you wash in conditions that are not in mounting information, please contact Murata engineering.

#### 2. Soldering

Reliability decreases with improper soldering methods. Please solder by the standard soldering conditions shown in mounting information.

#### 2. Storage Conditions

- (1) Storage temperature: -10 to 40 degrees C  
Relative humidity: 30 to 70%  
Avoid sudden changes in temperature and humidity.
- (2) Do not store products in a chemical atmosphere such as chlorine gas, acid or sulfide gas.
- (3) When restoring taping type (BL01RN1A1F1J), please attach the Spacer between flanges of reel. The Spacer is corrugated paper which is attached when shipping.

#### 3. Other

Noise suppression levels resulting from Murata's EMI suppression filters "EMIFIL" may vary, depending on the circuits and ICs used, type of noise, mounting pattern, lead wire length, mounting location, and other operating conditions. Be sure to check and confirm in advance the noise suppression effect of each filter, in actual circuits, etc. before applying the filter in a commercial-purpose equipment design.

## Microwave Absorbers Notice

### ■ Notice (Storage and Operating Conditions)

#### 1. Adhesive Tape Stress

This product is designed for using the adhesive tape to hold itself to the object.

And please avoid causing mechanical stress by bending or variation of the object.

#### 2. Cleaning

Avoid cleaning product.

#### 3. Handling of the product

Adhesive tape must be clean to maintain the quality of tape.

And please wipe off any dirt, dust and any kind of oil from the surface of the object before use.

#### 4. Storage Conditions

##### (1) Storage period

Products which were inspected in Murata over 6 months ago should be examined and used. This can be confirmed with inspection No. marked on the container. Adhesiveness should be checked if this period is exceeded.

##### (2) Storage conditions

· Products should be stored in the warehouse on the following conditions.

Temperature: -10 to 40°C

Humidity: 30 to 70% relative humidity

No rapid change on temperature and humidity

· Products should be stored in the warehouse without heat shock, vibration, direct sunlight and so on.

## EMIFIL® (Soldering and Mounting)

### 1. Standard Land Pattern Dimensions

NF□ series suppress noise by conducting the high-frequency noise element to ground. Therefore, to obtain maximum performance from these filters, the ground pattern should be made as large as possible during the PCB design stage. As shown below, one side of the PCB is used for chip mounting, and the other is used for grounding.

Small diameter feedthrough holes are then used to connect the grounds on each side of the PCB. This reduces the high-frequency impedance of the grounding and maximizes the filter's performance.

<b>BNX022</b>		<ol style="list-style-type: none"> <li>(1) A double-sided print board (or multilayer board) as shown in the left figure is designed, and please apply a soldering Cu electrode with a product electrode to a "Land Pattern", apply resist to a "Land Pattern + Solder Resist" at Cu electrode.</li> <li>(2) Please drop CG on a ground electrode on the back layer (the same also in a multilayer case) by the through hole. And a surface ground electrode layer may also take a large area as much as possible.</li> <li>(3) It is recommended to use a double-sided printed circuit board with BNX mounting on one side and the ground pattern on the other in order to maximize filtering performance, multiple feed through holes are required to maximize the BNX's connection to ground.</li> <li>(4) The ground pattern should be designed to be as large as possible to achieve maximum filtering performance.</li> </ol>
---------------	--	--

### 2. Solder Paste Printing and Adhesive Application

When reflow soldering the chip EMI suppression filter, the printing must be conducted in accordance with the following cream solder printing conditions.

If too much solder is applied, the chip will be prone to damage by mechanical and thermal stress from the PCB and may crack.

Standard land dimensions should be used for resist and copper foil patterns.

When flow soldering the EMI suppression filter, apply the adhesive in accordance with the following conditions.

If too much adhesive is applied, then it may overflow into the land or termination areas and yield poor solderability.

In contrast, if insufficient adhesive is applied, or if the adhesive is not sufficiently hardened, then the chip may become detached during flow soldering process.

## EMIFIL® (Soldering and Mounting)

☐ Continued from the preceding page.

### 3. Standard Soldering Conditions

#### (1) Soldering Methods

Use flow and reflow soldering methods only.

Use standard soldering conditions when soldering chip  
EMI suppression filters chip varistor.

In cases where several different parts are soldered, each having different soldering conditions, use those conditions requiring the least heat and minimum time.

Solder: H60A H63A solder (JIS Z 3238)

In case of lead-free solder, use Sn-3.0Ag-0.5Cu solder

Flux:

● Use Rosin-based flux.

In case of DLW21/31 series, use Rosin-based flux with converting chlorine content 0.06 to 0.1wt%.

In case of using RA type solder, products shall be cleaned completely no residual flux.

● Do not use strong acidic flux (with chlorine content exceeding 0.20wt%)

● Do not use water-soluble flux.

For additional mounting methods, please contact Murata.

#### (2) Soldering profile

● Flow Soldering profile  
(Eutectic solder, Sn-3.0Ag-0.5Cu solder)

Series	Pre-heating		Standard Profile			Limit Profile		
	Temp. (T1)	Time. (t1)	Heating		Cycle of flow	Heating		Cycle of flow
			Temp. (T2)	Time. (t2)		Temp. (T3)	Time. (t2)

(3) **Reworking with Solder Iron**

The following conditions must be strictly followed when using a soldering iron.

Pre-heating: 150°C 60s min.

Soldering iron power output: 30W max.

Temperature of soldering iron tip / Soldering time: 280°C max./10s max. or 300°C max./3s max.\*

\*NFE31PT152Z1E9: 280°C max./10s max. only

BLM : 350°C max./3s max.

BNX022 : 450°C max./5s max./2 times

Do not allow the tip of the soldering iron to directly contact the chip.

For additional methods of reworking with a soldering iron, please contact Murata engineering.

Continued on the following page. ↗

## EMIFIL® (Soldering and Mounting)

☒ Continued from the preceding page.

### 4. Cleaning

Following conditions should be observed when cleaning chip EMI filter.

- (1) Cleaning Temperature: 60°C max. (40°C max. for alcohol type cleaner)
- (2) Ultrasonic  
Output: 20W/liter max.  
Duration: 5 minutes max.  
Frequency: 28 to 40kHz
- (3) Cleaning agent  
The following list of cleaning agents have been tested on the individual components. Evaluation of final assembly should be completed prior to production.

Do not clean DLW21S/31S/5AH/5BS/BNX022 series.  
In case of cleaning, please contact Murata engineering.

- (a) Alcohol cleaning agent  
Isopropyl alcohol (IPA)
- (b) Aqueous cleaning agent  
Pine Alpha ST-100S
- (4) Ensure that flux residue is completely removed.  
Component should be thoroughly dried after aqueous agent has been removed with deionized water.
- (5) Some products may become slightly whitened.  
However, product performance or usage is not affected.  
For additional cleaning methods, please contact Murata engineering.

### 5. Mounting of BLM15A\_AN Series

BLM15A\_AN is series for wire bonding mounting.

#### (1) Die bonding mounting

##### (a) Dimension of standard metal mask

##### (b) Die bonding agent

- Use adhesive for die bonding for which the curing temperature is 200°C or less.

##### (c) Notice

- Use a flat surface of substrate for bonding mounting.  
Slant mounting of product may affect the wire bonding.
- Adhesive for die bonding may affect the mounting reliability in wire bonding.  
Make sure of the mounting reliability with the adhesive to be used in advance.

## Lead Type EMIFIL® (Soldering and Mounting)

### 1. Mounting Hole

Mounting holes should be designed as specified below.

Part number	Bulk type (in mm)	Taping type (in mm)
<b>DSN6</b> <b>DSS6</b> <b>VFR3V</b> <b>VFS6V</b>		
<b>DSN9</b> <b>DSN9H</b>		
<b>DST9</b> <b>DST9H</b>		
<b>DSS9</b> <b>DSS9H</b> <b>VFS9V</b>		
<b>BNX00□/01□</b>	<p>[Component Side]</p>	<p>[TERMINAL LAYOUT (Bottom figure)]</p> <p>PSG : Power supply ground              CG : Load circuit ground              CB : Load circuit + Bias</p>

Continued on the following page.

## Lead Type EMIFIL<sup>®</sup> (Soldering and Mounting)

☐ Continued from the preceding page.

### 2. Using The Block Type EMIFIL<sup>®</sup> Effectively

#### (1) How to use effectively

This product effectively prevents undesired radiation and external noise from going out / entering the circuit by grounding the high frequency components which cause noise problems. Therefore, grounding conditions may affect the performance of the filter and attention should be paid to the following for effective use.

- Design maximized grounding area in the P.C. board, and grounding pattern for all the grounding terminals of the product to be connected. (Please follow the specified recommendations.)
- Minimize the distance between ground of the P.C. board and the ground plate of the product. (Recommended to use through-hole connection between grounding area both of component side and bottom side.)
- Insert the terminals into the holes on P.C. board completely.
- Don't connect PSG terminal with CG terminal directly. (See the item 1. TERMINAL LAYOUT)

#### (2) Self-heating

Though this product has a large rated current, localized self-heating may be caused depending on soldering conditions.

To avoid this, attention should be paid to the following:

- Use P.C. board with our recommendation on hole diameter / land pattern dimensions, mentioned in the right hand drawing, especially for 4 terminals which pass current.
- Solder the terminals to the P.C. board with solder-cover area at least 90%. Otherwise, excess self-heating at connection between terminals and P.C. board may lead to smoke and / or fire of the product even when operating at rated current.
- After installing this product in your product, please make sure of the self-heating with the rated current.

### [P. C. BOARD PATTERNS]

Use a bilateral P.C. board. Insert the BNX into the P.C. board until the root of the terminal is secured, then solder.

#### (1) COMPONENT SIDE VIEW (2) BOTTOM VIEW

### [Recommendation land pattern]

Continued on the following page. ☐ ↗

## Lead Type EMIFIL® (Soldering and Mounting)

☐ Continued from the preceding page.

### 3. Using EMIGUARD® effectively

- (1) Terminal (with mark) should be properly connected to the line of incoming electrostatic surge. (There is polarity.) Otherwise, no effect in ESD suppression can be expected (VFR3V).
- (2) Products should be used at rated voltage or less and rated current or less.
- (3) Products should not be applied for the absorption of surges which have large energy (ex. induced lightning surges, switching surges) because it is designed for the absorption of electrostatic surges (VFR3V).
- (4) Electrostatic test should be done on the following conditions (VFR3V).
 
$$n \cdot [C / R \cdot V^2]^2 < 8.0 \times 10^5$$
  - n: Times applied
  - C: Charging Capacitance (pF)
  - V: Testing Voltage (kV)
  - R: Charging Resistance ( $\Omega$ )

### 4. Soldering

- (1) Solder: H60A, H63A solder (JIS Z 3238)  
In case of lead-free solder, use Sn-3.0Ag-0.5Cu solder.
- (2) Use Rosin-based flux. Do not use strong acidic flux with halide content exceeding 0.2wt% (chlorine conversion value).
- (3) Products and the leads should not be subjected to any mechanical stress during the soldering process, or while subjected to the equivalent high temperatures.
- (4) Standard flow soldering profile

### 5. Cleaning Conditions

Do not clean VFR3V, PLT09H and VFS6V series.  
Clean other parts in the following conditions.

- (1) Cleaning temperature should be limited to 60°C max. (40°C max for alcohol type cleaner.)
- (2) Ultrasonic cleaning should be complied with the following conditions, avoiding the resonance phenomenon at the mounted products and P.C.B.
  - Power: 20 W / l max. Frequency: 28 to 40kHz
  - Time: 5 min. max.
- (3) Cleaner
  - (a) Alcohol type cleaner  
Isopropyl alcohol (IPA)

(b) Aqueous agent (PLT series cannot be cleaned)  
PINE ALPHA ST-100S

- (4) There should be no residual flux or residual cleaner left after cleaning.  
In the case of using aqueous agent, products should be dried completely after rinsing with de-ionized water in order to remove the cleaner.
- (5) The surface of products may become dirty after cleaning, but there is no deterioration on mechanical, electrical characteristics and reliability.
- (6) Other cleaning: Please contact us.

Description	Symbol	Dimension (mm)	Remarks	
Pitch of component	P	12.7	Product inclination ΔS determines tolerance	
Pitch of sprocket hole	P0	12.7±0.2		
Lead spacing	F	5.0 <sup>+0.8</sup> <sub>-0.2</sub>		
Hole center to lead	P1	3.85±0.7		
Hole center to component center	P2	6.35±1.3	Tape deviation in feeding direction	
Offset of bead	ΔS	±1.0	Include the offset caused by lead bend	
Carrier tape width	W	18.0±0.5		
Position of sprocket hole	W1	9.0 <sup>+0</sup> <sub>-0.5</sub>	Tape with deviation	
Lead length between sprocket hole and forming position	H1	Lead Length Number : N	16.5±0.5	BL02, BL03
		Lead Length Number : Q	20.0±0.5	BL02RN1R2/2R1, BL03
		Lead Length Number : P	18.5±0.5	BL02, BL03
Protruding length	l	+0.5 to -1.0		
Diameter of sprocket hole	D0	ø4.0±0.1		
Lead Diameter	ød	ø0.60		
Total tape thickness	t	0.7±0.2	Including bonding tape thickness	
Deviation across tape, Deviation across tape rear	Δh1, Δh2	1.0 max.		
Cutting position of failure	L	11.0 <sup>+0</sup> <sub>-1.0</sub>		
Hold down tape width	W0	12.0±0.5		
Hold down tape position	W2	1.5±1.5		

(in mm)

## Disc Type EMIFIL® and EMIGUARD® Packaging

### Minimum Quantity

Part Number	Minimum Order Quantity (order in sets only) (Pcs.)		
	Ammo Pack	ø320mm Paper reel	Bulk (Bag)

	ITE: Information Technology Equipment		CISPR 24			EN55024

\*1 Electrical Appliance and Material Safety Law

There are EMI regulations in each country to meet EMI noise levels emitted from digital equipment. In the countries which regulate EMI, equipment which does not satisfy regulations is not allowed to be sold.

Continued on the following page. 

## Outlines of Major Noise Regulation Standards

Continued from the preceding page.

### 2. Measurement Point and Noise Detection

Regulation	Measuring Item	Polarization and Measuring Point	Frequency (Hz)	Detection	Measuring Devices
CISPR 22/ EN55022	Radiated Interference	Horizontal Pol. Vertical Pol.	30M to 1GHz	Quasi-Peak Detection	Antenna
	Main Interference Voltage	AC Main Ports	150k to 30MHz	Quasi-Peak Detection Mean Detection	Artificial Main Network
VCCI	Radiated Interference	Horizontal Pol. Vertical Pol.	30M to 1GHz	Quasi-Peak Detection	Dipole Antenna
	Main Interference Voltage	AC Main Ports	150k to 30MHz	Quasi-Peak Detection Mean Detection	Artificial Main Network
FCC Part 15	Radiated Interference	Horizontal Pol. Vertical Pol.	30M to 40GHz	Quasi-Peak Detection Mean Detection	Antenna
	Main Interference Voltage	AC Main Ports	150k to 30MHz	Quasi-Peak Detection	Artificial Main Network

### 3. Limits of CISPR 22/EN55022

(1) CISPR 22 recommends measurement at 10m distance. However, other distance is acceptable if the limitation is converted according to the following calculation. Limitation shown left is converted to limitation for 3m distance.

Conversion

Limitation for 10m Distance	→	Limitation for 3m Distance
R <sub>10</sub> (dB μ V/m)		R <sub>3</sub> (dB μ V/m)
r <sub>10</sub> (μ V/m)		r <sub>3</sub> (μ V/m)
R <sub>10</sub> = 20 log r <sub>10</sub>		R <sub>3</sub> = 20 log r <sub>3</sub>
		R <sub>3</sub> = R <sub>10</sub> + 20 (1 - log 3)
		$r_3 = \frac{10}{3} r_{10}$

[Main Terminal Interference Voltage (Power Supply)]

[Radiated Interference]

On the border frequency, lower limit should be applied.

Class A Equipment: The equipment which is used in light industrial commercial areas.

Class B Equipment: The equipment which is used in residential areas.

Continued on the following page.

## Outlines of Major Noise Regulation Standards

Continued from the preceding page.

### (2) Scope of CISPR 22 Regulation

This regulation applies to information technology equipment (ITE) which is defined as:

- (a) Equipment that receives data from external signal sources;
- (b) Equipment that processes received data;
- (c) Equipment that outputs data; and
- (d) Equipment that has less than 600V rated voltage in power supply.

### [CISPR Regulations]

- CISPR 10 Organization, Regulations and Procedures of CISPR
- CISPR 11 Industrial, Scientific and Medical (ISM) Radio-Frequency Equipment
- CISPR 12 Vehicles, Motor Boats and Spark-Ignited Engine driven
- CISPR 13 Sound and Television Receivers
- CISPR 14 Household Electrical Appliances, Portable Tools and Similar Electrical Apparatus
- CISPR 15 Fluorescent Lamps and luminaries
- CISPR 16 Radio Interference Measuring Apparatus and Measurement Methods
- CISPR 17 Passive Radio Interference Filters and Suppression Components
- CISPR 18 Power Transmission Cables and High Voltage equipment
- CISPR 19 Microwave Ovens for Frequencies above 1GHz
- CISPR 20 Immunity of Sound and TV Broadcast Receivers and Associated Equipment
- CISPR 21 Interference to Mobile Radio communications in the Presence of Impulsive Noise
- CISPR 22 Information Technology Equipment
- CISPR 23 Industrial Scientific and Medical (ISM) Equipment
- CISPR 24 Immunity Regulation of Information Technology Equipment
- CISPR 25 Receiver used on board vehicles, boats, and on devices

### 4. Limits of VCCI Voluntary Regulation

- (1) VCCI recommends measurement at 10m distance; 3m or 30m distance measurements are also allowed.

### (2) Scope of VCCI Voluntary Regulation

This regulation applies to information technology equipment (same as CISPR Pub.22), but the application is excluded on the following equipment:

- Equipment for which other regulations already exist (e.g., household electrical appliances, radio and TV receivers)
- In station equipment principal purpose of which is electrical communication
- Industrial plant control system for which information processing is a secondary system function
- Industrial, commercial and medical testing and measuring systems for which data processing is a secondary system function
- Information equipment for which CISPR is conducting further deliberation

VCCI is the acronym of Voluntary Control Council for Interference by Data Processing Equipment and Electronic Office Machines.

VCCI is organized by the following organizations:

- Japan Electronics and Information Technology Industries Association (JEITA)
- Japan Business Machine and Information System Industries Association (JBMA)
- Communication and Information Network Association of Japan (CIAJ)

### [Main Terminal Interference Voltage (Power Supply)]

### [Radiated Interference]

On the border frequency, lower limit should be applied.

Class B ITE: Equipment that is designed to be used at home.  
 Class A ITE: Equipment that does not meet interference limits of class B equipment, but satisfies interference limits of class A equipment.

Continued on the following page. ↗

## Outlines of Major Noise Regulation Standards

☐ Continued from the preceding page.

### 5. Limits of FCC Part 15 Subpart B

- (1) Class A recommended to be measured with 10m distance.  
Class B recommended to be measured with 3m distance.
- (2) The FCC Part 15 regulation controls radiated interference by establishing quasi-peak and mean value limits for frequencies ranging from 30MHz to 40GHz (or maximum frequency's fifth harmonic, whichever is lower).  
For AC main ports, the FCC Part 15 regulation controls main terminal interference voltage by establishing quasipeak value limits for frequencies ranging from 450kHz to 30MHz.

Measurement Frequency Range for Radiated Interference

Maximum Frequency the Equipment Internally Generates, Uses or Operates or Synchronizes (MHz)	Upper End of Measurement Frequency Range (MHz)
Less than 1.705	30
1.705 to 108	1000
108 to 500	2000
500 to 1000	5000
Over 1000	Maximum Frequency's Fifth Harmonic or 40GHz, Whichever is Lower

[Main Terminal Interference Voltage (Power Supply)]

[Radiated Interference]

On the border frequency, lower limit should be applied.

Class A Equipment: The digital equipment that is sold for commercial, industrial and office use.

Class B Equipment: The digital equipment that is sold to be used in residential areas.

- (3) There is no regulation on power interference.

[FCC Regulations]

- Part 1 Procedures
- Part 2 Frequency Division and Radio Wave Treaty Issues and General Rules
- Part 15 Radio Wave Equipment
  - Intentionally electromagnetic radiation equipment
  - Non-intentionally electromagnetic radiation equipment
  - Incidentally electromagnetic radiation equipment
- Part 18 Industrial, Scientific and Medical Equipment
- Part 22 Public Mobile Wireless Operations
- Part 68 Connecting Terminal Equipment to Telephone Circuit Network
- Part 76 Cable Television

Continued on the following page. ☐

## Outlines of Major Noise Regulation Standards

☒ Continued from the preceding page.

### 6. Immunity Regulations in the European Union

All electric/electronic equipment cannot be sold in Europe without CE marking. To use CE marking, they must satisfy related EC directives such as EMC directives.

For Information Technology Equipment, in EMC directive, emission regulations are integrated, and immunity regulations are applied. Although these immunity regulations are prepared by CENELEC, almost all contents are same as standards issued by IEC or CISPR.

All products which are sold in EU must satisfy EC directives which contain immunity regulations.

Principal EC Directive	
EMC Directive	89/336/EEC 92/31/EEC
Low-Voltage Electrical Products Directive	73/23/EEC
Machines Directive	89/392/EEC

### 7. Immunity Regulations in Japan

Equipment	Association
TV, Radio, Audio	JEITA (Japan Electronics and Information Technology)
ITE	
Office Machine	JBMIA (Japan Business Machine and Information System Industries Association)
Mi	CIAJ (Communication and Information Network Association of Japan) ARIB (Association of Radio Industries and Business)
Machine To Builders	JMTBA (Japan Machine Tool Builders' Association)
Industrial Measuring Control Equipment	JEMIMA (Japan Electric Measuring Instruments Manufacturers' Association)
Industrial Robot	JARA (Japan Robot Association)

The table on the right shows the preparation situation of JIS for EMC. At this moment, the immunity standards by JIS do not have a legal force like the Electrical Application and Material Safety Law/VCCI.

Classification	Information Regulation	JIS
Terms	ISO60050-161 (IEV terms 161)	JIS C 0161

# Noise Suppression Principles by DC EMIFIL®

## 1. Function of DC EMI Suppression Filters

DC EMI suppression filters absorb and eliminate high frequency noise which may produce electromagnetic interference in PC board circuits.

These filters are used in secondary circuits, and are small in size and light in weight, which further enhances their excellent noise suppression functions.

Chip and adhesive type filters can be mounted on PC boards automatically.

These filters are effective in the suppression of radiation noise in computers, peripheral equipment, and digital circuit application equipment (including various types of microcomputer application equipment), and function to suppress noise in audio/visual equipment, which uses digital memory chips and DSP.

These filters are also effective for improving the noise immunity of equipment used in noisy environments (such as electronic equipment for automobiles).

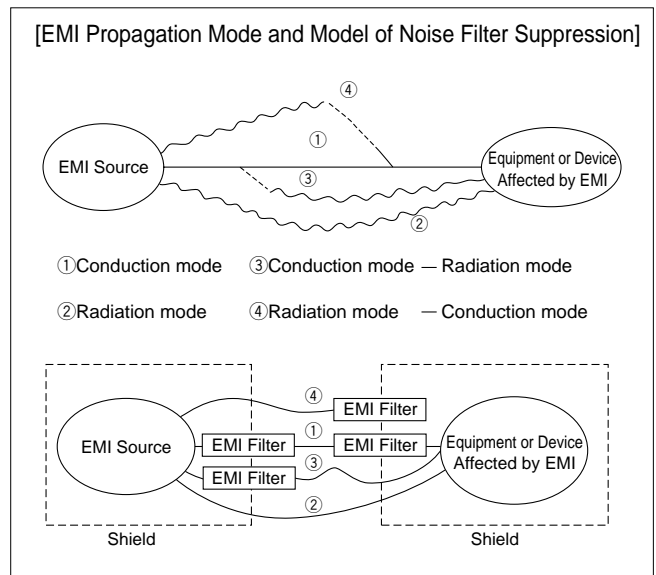

## 2. Noise Filter Suppression Principles

Generally, noise problems occur when the noise source and electronic equipment sensitive to the influence of noise are located in close proximity to one another.

In such situations, as shown in Figure at right, noise is conducted through a conductor, which produces an inductive field around the noise source.

To overcome such noise problems, it is preferable to reduce the amount of noise generated by the noise source or improve the noise resistance of adjacent equipment.

In order to satisfy equipment performance specifications and eliminate noise effectively at the same time, however, it is customary to reduce the amount of noise generated by the noise source, if it can't be eliminated altogether.

## 3. Configuration of EMI Suppression Filters (DC)

DC EMI suppression filters are used to suppress noise produced by conductors. Noise radiation can be suppressed, if it is eliminated with a filter in advance. Generally, such noise suppression is achieved with DC EMI suppression filters, according to the capacitive and inductive frequency characteristics of the respective conductors in the circuit.

Filters of this kind can be roughly divided into those:

- (1) employing a capacitor,
- (2) employing an inductor,
- (3) employing a capacitor and inductor combination.

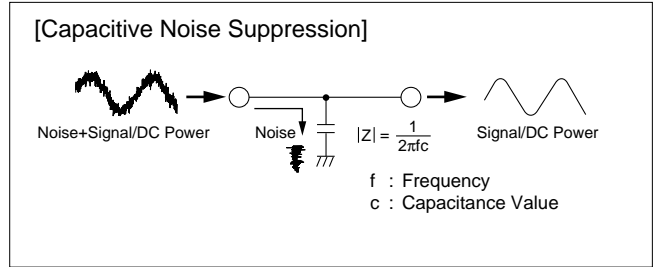

Continued on the following page.

Continued from the preceding page.

### 4. Capacitive Noise Suppression

When a capacitor is connected (bypass capacitor) to ground from a noisy signal line or power line, the circuit impedance decreases as the frequency increases. Since noise is a high frequency phenomenon, it flows to ground if a capacitor has been connected to ground, thereby making it possible to eliminate noise. (See Fig.) EMI suppression filters employing a capacitor in this way are used to eliminate this type of noise.

### 5. High frequency Capacitor Characteristics Used for EMI Suppression Filters

Even general-purpose capacitors can be used for noise suppression. However, since noise has an extremely high frequency range, general-purpose capacitors may not function as effective bypass capacitors, due to the large residual inductance built into the capacitor. All the capacitors used in Murata's EMI suppression filters employ a three terminal structure or thru-type structure, which functions effectively even at high frequencies, thereby minimizing the influence of residual inductance. Consequently, an effective filter circuit can be formed even at frequencies exceeding 1GHz. (Refer to Fig.)

### 6. Inductive Noise Suppression

When an inductor is inserted in series in a noise producing circuit (See Fig.), its impedance increases with frequency. In this configuration it is possible to attenuate and eliminate noise components (high frequency components). The Murata EMI suppression filter functions in this way.

Continued on the following page.

## Noise Suppression Principles by DC EMIFIL®

☐ Continued from the preceding page.

### 7. Characteristics of Inductors Used in EMI Suppression Filters

General-purpose inductors also function to suppress noise when configured in series with a noise producing circuit. However, when general-purpose inductors are used, resonance may result in peripheral circuits, signal wave forms may become distorted, and satisfactory impedance may not be obtained at noise frequencies (due to insufficient high frequency impedance characteristics).

The inductors used for Murata's EMI suppression filters are designed to function nearly as a resistor at noise frequencies, which greatly reduces the possibility of resonance and leaves signal wave forms undistorted. And since sufficient impedance is obtained for frequencies ranging to hundreds of MHz, these specifically designed inductors operate effectively to suppress high-frequency noise. (See Fig.)

### 8. Capacitive-Inductive EMI Suppression Filters

If capacitive and inductive suppression characteristics are combined, it is possible to configure a much higher performance filter. In signal circuit applications where this combination is applied, noise suppression effects which have little influence on the signal wave form become possible.

This type of filter is also effective in the suppression of high-speed signal circuit noise. When used in DC power circuits, capacitive-inductive filters prevent resonance from occurring in peripheral circuits, thus making it possible to achieve significant noise suppression under normal service conditions.

### 9. Other EMI Suppression Filters

In addition to the capacitive-inductive filter, Murata also has an EMI suppression filter (EMIGUARD®) combining a capacitor with a varistor, useful for surge absorption; and a common mode choke coil effective, for common mode noise suppression.

Murata also has a range of built-in filter connectors which greatly reduce filter mounting space requirements.

### 10. Expressing EMI Suppression Filter Effects

EMI Suppression Filter effects are expressed in terms of the insertion loss measured in the circuit, normally specified in MIL-STD 220A. As shown in the 50Ω impedance circuit in the Figure at right, insertion loss is represented by the logarithmic ratio of the circuit output voltage with and without a filter in the circuit, which is multiplied by 20 and expressed in dB.

Therefore, an insertion loss of 20dB indicates an output voltage ratio (B/C) of 1/10, and an insertion loss of 40dB indicates an output voltage ratio (B/C) of 1/100.

# Murata EMI Filter Selection Simulator Ver. 3.0.0

— Link function to the web catalog has been added —

## 1 Select circuit.

(Select a new simulation circuit from File menu.)

## 2 Enter "Input Signal".

## 3 Set Driver IC.

## 4 Select filter.

(EMI filters or/and chip capacitor from the pull-down list.)

## 5 Set Transmission Line.

## 6 Set Receiver IC.

## 7 Click measuring point.

(Only for chip ferrite bead)

## 8 Click "Start Simulation" button.

## 9 Simulation results are displayed.

- Simulation results with various charts are quickly displayed on your PC.
- Results can be displayed in standard format or user defined scaling.
- Simulates various types of circuit such as Differential Mode Transmission, ceramic capacitor, EMIFIL®, three terminal capacitor and chip ferrite beads.
- Provides a simulation function that selects best suited Chip EMIFIL®.

### 1 Select circuit.

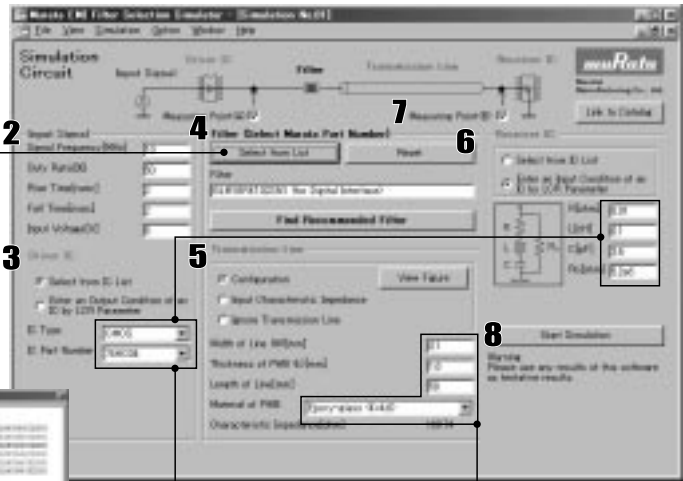

Select a new simulation circuit from File menu.

### 4 Filters can be selected from "frequency-impedance characteristics" charts.

### 9 Simulation results are shown in the window.

Two ways of setting the driver/receiver IC parameter

The logic IC of TTL and CMOS can be selected from pull-down list or the LCR values can also be created.

Impedance automatically calculated.

Impedance characteristics of transmission line are automatically calculated.

Link to the web catalog is available **NEW**

This button allows you to see more information at web catalog. (Need connection to the Internet)

**△ Note:**

1. Export Control

〈For customers outside Japan〉

Murata products should not be used or sold for use in the development, production, stockpiling or utilization of any conventional weapons or mass-destructive weapons (nuclear weapons, chemical or biological weapons, or missiles), or any other weapons.

〈For customers in Japan〉

For products which are controlled items subject to the "Foreign Exchange and Foreign Trade Law" of Japan, the export license specified by the law is required for export.

2. Please contact our sales representatives or product engineers before using the products in this catalog for the applications listed below, which require especially high reliability for the prevention of defects which might directly damage to a third party's life, body or property, or when one of our products is intended for use in applications other than those specified in this catalog.

- |                             |   |
|-----------------------------|---|
| ① Aircraft equipment        | ② Aerospace equipment   |
| ③ Undersea equipment        | ④ Power plant equipment   |
| ⑤ Medical equipment         | ⑥ Transportation equipment (vehicles, trains, ships, etc.)  |
| ⑦ Traffic signal equipment  | ⑧ Disaster prevention / crime prevention equipment  |
| ⑨ Data-processing equipment | ⑩ Application of similar complexity and/or reliability requirements to the applications listed in the above |

3. Product specifications in this catalog are as of January 2006. They are subject to change or our products in it may be discontinued without advance notice. Please check with our sales representatives or product engineers before ordering. If there are any questions, please contact our sales representatives or product engineers.

4. Please read rating and △CAUTION (for storage, operating, rating, soldering, mounting and handling) in this catalog to prevent smoking and/or burning, etc.

5. This catalog has only typical specifications because there is no space for detailed specifications. Therefore, please approve our product specifications or transact the approval sheet for product specifications before ordering.

6. Please note that unless otherwise specified, we shall assume no responsibility whatsoever for any conflict or dispute that may occur in connection with the effect of our and/or a third party's intellectual property rights and other related rights in consideration of your use of our products and/or information described or contained in our catalogs. In this connection, no representation shall be made to the effect that any third parties are authorized to use the rights mentioned above under licenses without our consent.

7. No ozone depleting substances (ODS) under the Montreal Protocol are used in our manufacturing process.
